January 24, 2017

To Whom It May Concern:

Accelerated Concepts, Inc. has sponsored the inclusion of two platforms ("Operational Environments") to the FIPS 140-2 Level 1 validation of the OpenSSL FIPS Object Module v2.0 (validation certificate #2473). Those platforms are:

uClinux-dist-5.0 on Marvell Feroceon 88FR131 (ARMv5TE)
uClinux-dist-5.0 on Marvell Armada 370 (ARMv7)

which are listed as platform numbers 17 and 18 in Table 2 of the Security Policy document which can be found at:

<http://csrc.nist.gov/groups/STM/cmvp/documents/140-1/140sp/140sp2473.pdf>

These platform validations for module revision 2.0.10 were approved by the Cryptographic Module Validation Program (CMVP) on January 20, 2017.

Such platform sponsorships have greatly increased the utility of the OpenSSL FIPS Object Module. Thanks to sponsors such as Accelerated Concepts, the OpenSSL FIPS Object Module v2.0 validations (#1747/#2398/#2473) currently include over 200 platforms, far more than any other validated module and in use by several thousand vendors.

For further questions about this validation please feel free to contact me directly at +1 301-874-2571 or marquess@openssl.com.

Sincerely,

Steve Marquess
President
