

6300-CX LTE Router: C-Store

The Accelerated 6300-CX ensures your (Primary or Fail-Over) 4G LTE Data connection is performing at its best in all of your C-Store locations. 4G LTE Data connectivity in an equipment room can be challenging due to poor cellular signal. Our solution solves that problem. Simply mount the 6300-CX in the area where your 4G LTE Data connection signal is strongest, then run a simple Ethernet cable back to your equipment room. 4G LTE traffic is passed through via IP without the dB loss that occurs with external antennas. This will result in faster speeds, better connection and improved 4G LTE performance for all of your network connected devices.

C-Store Location:

Connected Devices

- Point of sale
- Digital signage
- Credit card terminal
- Security cameras

Easy to Install
Simple setup process
& remote management

Rapid Mounting
Multiple mounting options for drywall,
drop ceiling, open ceiling & glass

6300-CX
LTE ROUTER

Temporary Battery Pack
Included battery for site survey to identify
optimal signal strength placement

PoE Power
PoE injector included

Accelerated ViewTM
Enterprise cloud management suite

Competitively Priced
Best price for performance

**Optimal 4G LTE
Data Connections**
Verizon, AT&T, T-Mobile, Canadian
and European Carriers Certified
