

6300-CX LTE Router: Construction

The Accelerated 6300-CX ensures your (Primary or Fail-Over) 4G LTE Data connection performs at its best in challenging construction site environments. 4G LTE Data connections in these environments can be poor due to concrete and metal walls which interfere with signal. Using the 6300-CX gives the flexibility to mount up to 300 feet from existing equipment. This may be in offices or near a window where 4G LTE Data connection is the strongest, then run a simple Ethernet cable back to your modem or router. 4G LTE traffic is passed through via IP without the dB loss that occurs with external antennas. The result is faster speeds, better connections and improved 4G LTE performance.

Construction Site:

Connected Devices

- Metering/monitoring equipment
- Office network connectivity
- Security cameras

Temporary Battery Pack

Included battery for site survey to identify optimal signal strength placement

Accelerated ViewTM

Enterprise cloud management suite

Easy to Install

Simple setup process
& remote management

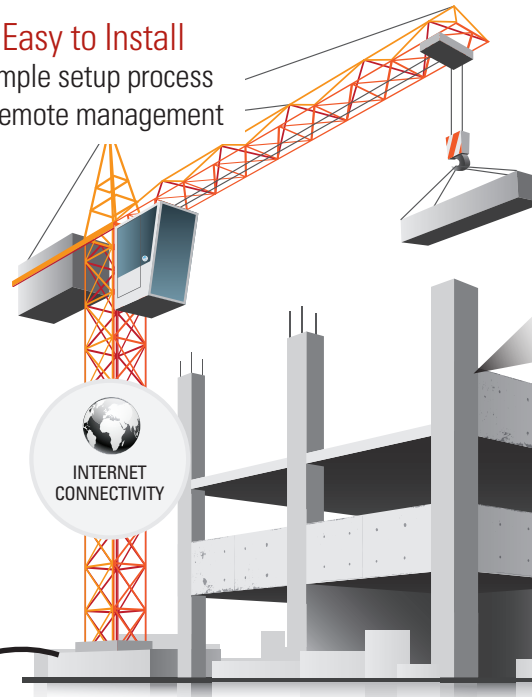

PoE Power

PoE injector included

6300-CX
LTE ROUTER

Rapid Mounting

Multiple mounting options for drywall,
drop ceiling, open ceiling & glass

Optimal 4G LTE Data Connections

Verizon, AT&T and T-Mobile Certified

Competitively Priced

Best price for performance

Complimentary to Existing Infrastructure

Gain flexibility
& protect your investment
