

6300-CX LTE Router: Mobile Kiosk and/or 'Store within a Store'

The Accelerated 6300-CX ensures (Primary or Fail-Over) the best data connection performance when using 4G LTE data at a stand-alone mobile kiosk (such as a mall or pop-up store). Challenges may include the inability for a land line connection or the kiosk location is in an area with poor 4G LTE data reception. By using our 6300-CX, you can perform your own site survey using our convenient temporary battery backup. Locate a great 4G LTE Data signal, mount your device and run standard Ethernet (up to 300 feet with CAT 6) back to your kiosk. Avoid costly site surveys and connect your kiosk for a great 4G LTE data connection.

Retail Environment:

Connected Devices

- Point of sale
- Credit card terminal
- Security cameras

Temporary Battery Backup

Included battery for site survey to identify optimal signal strength placement

Accelerated ViewTM

Enterprise cloud management suite
