

6300-CX LTE Router: Retail Storefront

The Accelerated 6300-CX ensures your (Primary or Fail-Over) 4G LTE Data connection is performing at its best in all of your retail locations. 4G LTE Data connectivity in an equipment room can be challenging due to poor cellular signal. Our solution solves that problem. Simply mount the 6300-CX in the area where your 4G LTE Data connection signal is strongest, then run a simple Ethernet cable back to your data center or equipment room. 4G LTE traffic is passed through via IP without the dB loss that occurs with external antennas. This will result in faster speeds, better connection and improved 4G LTE performance.

Retail Environment:

Connected Devices

- Point of sale
- Back office internet connectivity
- Digital signage
- Credit card terminal
- Security cameras

Temporary Battery Backup

Included battery for site survey to identify optimal signal strength placement

Accelerated ViewTM

Enterprise cloud management suite

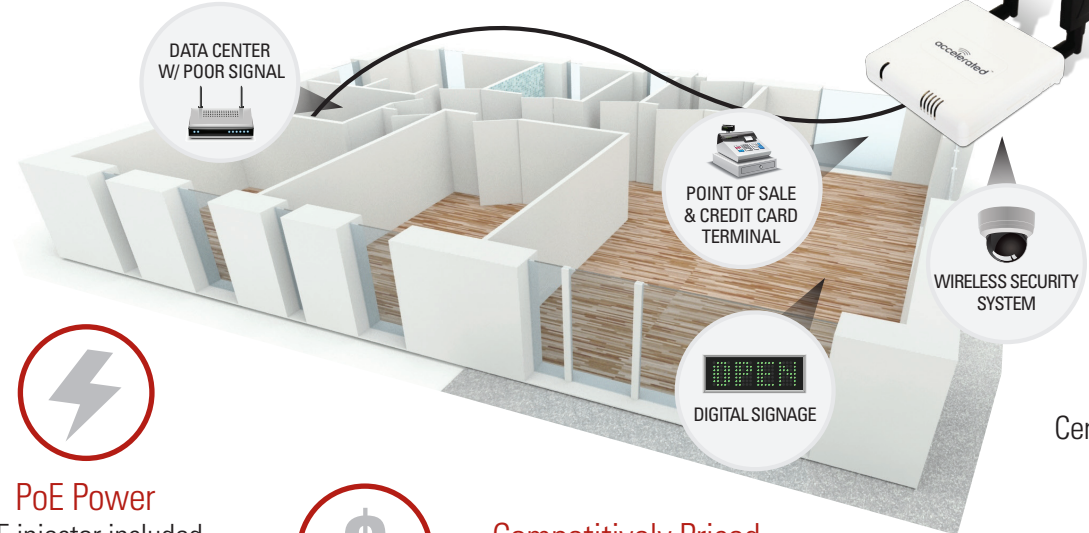

Rapid Mounting

Multiple mounting options for drywall, drop ceiling, open ceiling & glass

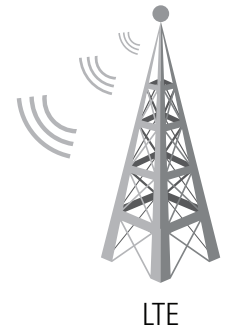

Easy to Install

Simple setup process & remote management
